Passage Free Function or Hold Back

Hold Back
A Hold Back feature on a lock is a mechanical way of holding back the latching mechanism so the door remains unlatched.

Passage Free or Code Free
In Code Free mode the outside lever will retract the latch bolt without using a code. This option is ideal for day to day use when punching in a code is not necessary.

By CODE. By CARD. By PHONE Smarter Lock

Code. Card. Phone

The new SMART Lock CL5510 makes access control easier, offering flexibility and convenience by providing a range of entry methods ;

Push Button Code
Mifare Smart Card
Smartphone (via an App - K3 Connect App)

It utilizes wireless technology to give building managers the ability to program locks via a Smartphone.

You can generate and send entry codes for easy access, timed access and restricted access.

The CL5510 supports up to 350 users, with 100 client user codes, 100 phone clients and 150 smart cards.

The K3 Connect App is iOS and Androice compatible and can manage all aspects of the lock.

A full lock Audit Trail can be downloaded and viewed on the app.

NetCodes can be generated that can be either emailed or text allowing one off or restricted access to the lock.

Code-free mode can be set at fixed time of the day, allowing free passage during working hours if necessary.
